

Verifysoft Technology GmbH Signs Distribution Agreement with APPENTRA SOLUTIONS S.L. for Revolutionary Product Codee

The long-term leader in the embedded market incorporates an innovative disruptive technology to its portfolio.

Offenburg, Deutschland / A Coruña, Spain, 30 November 2023

Verifysoft Technology GmbH has signed a distribution agreement with APPENTRA SOLUTIONS S.L. for the innovative product Codee. This partnership is an important step in revolutionizing software development.

Codee is a groundbreaking software development platform specialized in automated code inspection that provides a tailor-made solution for optimizing the performance of C/C++/Fortran applications. Through a systematic and predictable approach, and leveraging the knowledge compiled in Codee's [Open Catalog of Best Practices for Performance](#), Codee enables developers to improve the performance of their source code to achieve maximum efficiency.

"We have a strong customer base for our code coverage tool Testwell CTC++ and CodeSecure's static analysis tool CodeSonar. Codee's static analysis tool for uncovering performance bottlenecks is an excellent addition to our offering. We are very excited to make Codee's new technology available to our customers in the German-speaking region," said Klaus Lambertz, CEO and founder of Verifysoft Technology.

Codee is used very early in the development process as well as during the testing phase. One of Codee's outstanding features is its ability to scan source code without execution and instantly generate a detailed report for developers tailored to the specific target environment (defined by the compiler, hardware and operating system). This report not only provides an accurate representation of the performance problems in the code, but also shows their exact location, performance impact, and provides solutions to fix them. This allows developers to quickly identify potential performance bottlenecks and implement effective solutions.

"Code performance is critical to many applications. For example, a braking maneuver must be executed within a narrow time window, or it must be possible to react to control deviations without long dead times. We see a huge market for such solutions," said Royd Lüdtker, director of static analysis tools at Verifysoft.

Manuel Arenaz, CEO of Codee, expressed excitement about collaborating with Verifysoft, noting, "We are thrilled to start working together with such an experienced and talented team. Verifysoft has a broad market knowledge and many trusting customers for which Codee aims to add value."

We are excited to add this highly innovative tool to our portfolio and offer our customers a new standard for efficiency and quality in software development," said Klaus Lambertz, CEO and founder of Verifysoft Technology.

About Verifysoft

Verifysoft Technology GmbH is a leading provider of tools, services and training to increase software quality and reduce development costs in the embedded sector. Founded in 2003, the company serves over 750 customers in 43 countries worldwide with an international team of consultants at its headquarters in Offenburg, Germany. One focus of Verifysoft Technology is the measurement and documentation of code coverage and code quality. To this end, Verifysoft Technology offers Testwell CTC++, Testwell CMT++ and Testwell CMTJava solutions, which are used in all safety-critical industries. In addition, Verifysoft Technology is a distributor for various complementary tools for software quality assurance, such as static code analysis.

About Codee

Codee software development platform includes tools to help improve the performance of C/C++/Fortran applications. Codee Static Code Analyzer offers a systematic predictable approach to enforce C/C++/Fortran performance optimization best practices for the target environment: hardware, compiler and operating system. Additionally, it provides innovative Coding Assistant capabilities to enable semi-automatic source code rewriting through the software development lifecycle. Take your CI/CD pipeline to the next level by adding code performance to your Shift Left strategy.

Codee's solutions are empowering developers in multiple industries in the embedded computing and high-performance computing ecosystems, including aerospace, renewable energy, automotive, healthcare and HPC organizations worldwide.
